

עירובין פד

A בור that is between the second and lower level of a חצר that is filled with fruits that are טבל--which are אסור to move on שבת--if the enbankment is ten טפחים tall, then it belongs to the second level, if not, then to the lower kevel.

If the lower and higher level each made their own separate עירוב but did not join in an עירוב, ledges that stick out from a wall that is standing next to a lower and higher level that are within ten טפחים may only be used by the lower level. Ledges that stick out higher than ten טפחים may only be used by the higher level.
