

A stream of water that passes through a חצר that is ten טפחים deep and four טפחים wide, may not be drawn from on שבת unless a מחיצה is built at the entrance and exit of the חצר. If the stream flows between two חצירות, if the windows of the חצר are within three טפחים of the stream, they do not need to make an מחיצה.

A כרמלית is minimally four טפחים wide.

If a stream of water goes under a balcony, it is אסור to draw water from the stream unless he makes a מחיצה from all sides under the window that is 4x4 טפחים.

If there are two balconies one above the other, if only the top made a מחיצה, the bottom must make an עירוב to join with the top מחיצה.
